Beer & Beverage

AS-200d Digital AutoShaker Beverage CO2 Calculator

CAN-85B, CAN-125B Pasteurization Temperature Monitor (PU Monitor)

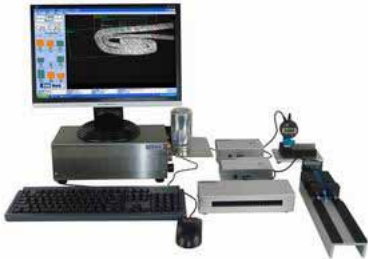

CAN-7001 CO2 Tester and Pressure Tester

GMT-100 Portable Beverage CO2 Meter (CO2-Gehaltmeter)

Can and End

Seam Sight(TM) Full Automatic Seam Measurement System

DER-4 Digital Enamel Rater

AXL-4000 Axial Load Tester

CBT-200 Buckle Tester Bottom for Can

Innovation

MBT-200 Hall Effect Thickness Gauge (Magnetic Bottle Thickness Gauge)

Canneed "MBT-200 Hall Effect Thickness Gauge (Magnetic Bottle Thickness Gauge)" is a refined portable bottle thickness gauge. It can measure the thickness of nonmagnetic material, such as plastic, glass, synthetics, aluminum and titanium, etc. The measurement accuracy is undistorted by the samples' shapes.

MBT-200 is based on the theory of Hall Effect. For test, place the steel ball on one side of the sample and the probe on the other side. The Hall Effect sensor on the probe measures the distance from the probe tip to the steel ball. The calculator will display the real thickness readings.

Glass Bottle Measuring

Plastic Bottle and Preform Measuring

Aluminum Bottle Measuring

MBT-200 Package

HWC-100 Hot Wire Bottle Cutter

The Hot Wire Cutter offers an easy-to-use and cost-effective method for cutting containers for section weight analysis. Using heated wires to do the cutting, the Hot Wire Cutter quickly slices through bottles as large as 3 liters, yielding a clean cut without deformation of the sections. The flexible, robust design makes the task of bottle cutting easier and more productive yet maintains the precision and repeatability that is needed for proper analysis.

Equipments for Bottle

PPG-100, PPG-200 Preform Perpendicularity Gauge

TLT-100 Top Load Tester

STT-100 / STT-100S Digital Torque Tester

VAT-300 Perpendicularity Tester for Bottle (Auto)

DHG-300 Digital Can Height Gauge

We have the excellence on: R&D, Service, Product Performance and Quality, and Customer Satisfactory
